

LRS vCISO

LRS vCISO, or Virtual CISO, is a service designed to make top-tier security experts available to organizations who need security expertise and guidance. Our team of experts have decades of experience; building information security programs that work WITH business objectives and show measurable improvement to security posture.

YOUR SECURITY ENVIRONMENT

Level 1, LRS Engage, provides an assessment of your security posture and offers guidance. This level includes a hardware, software and security controls inventory; development of a services and solutions catalog; vulnerability assessments; NIST assessment and training.

Level 2, LRS Protect, adds additional consultative and engineering functions, including Active Directory security engineering, third party risk assessments, and annual penetration testing with findings reports.

Level 3, LRS Shield, provides managed SIEM services, Cloud security assessment and engineering, advanced penetration testing by LRS and its partners, incident response planning, and technology BC/DR evaluation and planning.

Level 4, LRS Watchdog, offers clients the opportunity to select à la carte managed security solution offerings that extend the capabilities of the vCISO service. Offerings include network security, managed email security, and managed endpoint security.

LRS vCISO is not a one-size-fits-all solution. We provide a customized solution which is tailored to your needs.

Once we've assessed your business needs and requirements, we develop a unique blend of scans, reviews, and training, ensuring that your security programs, processes, and documentation are up to date.

We help you establish security roadmap, align security program with an industry framework, and support and augment your existing team.

LRS vCISO lets you scale from a consultative service to a fully managed security service as your needs evolve.

The LRS vCISO service offers actual CISOs – our Security team includes former CISOs in government and business – who know how to assess an existing security environment and create a roadmap for improving it.

Our team members also hold a staggering number of certifications, from CISSP and CCSP to seats on security advisory boards. They have experience with industry frameworks, including CSC and NIST, and understand why those frameworks are vital components of your security program.

The approach our Security team takes in designing a vCISO solution for you is, quite honestly, the way we do things at LRS IT Solutions. At LRS, we work with clients to develop programs that will support your business goals.

By combining our security expertise with a clear understanding of your business needs and the current state of security programs, our team of security experts provides clear insight and extensive experience to help you design security strategy and policy for your that is best for your business.

Call our Security team today.

They'll ask you some preliminary questions about your security environment and schedule a time for a free consultation.
