

# Your Partner for IBM Infrastructure Solutions

Not so long ago, IT infrastructure meant a mainframe, some servers, and a network. Today it means a constantly evolving mix of on-prem hardware, on-prem cloud, hybrid cloud, and many other options.

LRS IT Solutions was your trusted partner for IBM systems in those simpler times, and we continue to be your partner today. Technology never stands still, and neither do we.

As an IBM Platinum Business Partner, we can help you with:

- IBM Z / LinuxONE
- Power Systems
- IBM Storage
- Red Hat
- Cloud / Hybrid Cloud

## IBM Z

IBM has been in the mainframe business since 1964, and today's IBM Z and LinuxONE systems continue to set the standard for innovation, reliability, and security. We've been helping businesses analyze their mainframe needs, configure their mainframe, and install their mainframe for decades. Now, with support for open APIs and Kubernetes, LinuxONE helps your business create a hybrid environment that can include both on prem environments and public cloud services.

## Power Systems

Power servers from IBM offer power, speed, dependability, and flexibility. Whether you're implementing a hybrid multicloud environment or launching an AI initiative, Power servers can be configured to meet your needs and achieve your business goals.

LRS IT Solutions has a team of experts whose deep knowledge of hardware is matched by their ability to understand your business.

## Storage

IBM invented tape storage and the disk drive, but the company didn't stop innovating. Today's IBM storage options include everything from tape to flash and multiple hybrid options in between. You want to back up to the cloud? IBM's there too.

LRS IT Solutions is always ready to assess your current storage needs and help you determine your future needs as your business grows.

## Red Hat

Because hybrid cloud and hybrid multicloud are no longer the future but are important aspects of today's business environment, IBM's acquisition of Red Hat in 2019 signaled its commitment to innovation in the hybrid multicloud space.

The Cloud team at LRS IT Solutions was already adept at implementing Red Hat before IBM acquired the company. Our team can assess business needs and architect the best solution.

## Cloud

Speaking of Cloud, our team is adept at configuring and implementing IBM Cloud, Hybrid Cloud or other cloud offerings for your business.

Our team has extensive experience in deploying cloud environments. From allocating compute, storage, networking, to ensuring your security spans your cloud and on premises environment our team can provide value. They can also extend or architect a new solution that address your hybrid backup and recovery, and disaster recovery leveraging the IBM Cloud. And of course, our team can ensure that the integration of the IBM Cloud with your on-premises infrastructure or other public clouds is secure, and manageable.

## Always your trusted partner

For more than 25 years, LRS IT Solutions has been your trusted partner for IBM infrastructure solutions. We provide complete hardware business and data center solutions designed to address the dynamic nature of today's business environment.

We can help you transform your IT infrastructure for greater agility and easier management, allowing you to respond quickly to the demands of your internal and external customers.
