Virtual Chief Information Security Officer (vCISO)

LRS SECURITY SOLUTIONS

Few organizations can afford a full-time, executive-level CISO to supervise cybersecurity functions within their organizations, especially with today's scarcity of cybersecurity professionals. LRS can help address organizations' need of a CISO through their Virtual CISO offering. In this service, LRS' virtual CISOs guide customers through development, implementation, and management of strong security programs. These individuals have executive-level experience creating mature security organizations and leverage their skills to develop programs tailored to clients' business objectives and operations. They work with both executive and operational teams to design and implement effective cybersecurity programs.

Services

The vCISOs assigned to your organization will lead the strategic development of your cybersecurity program, regardless of your current maturity level. Possible services include:

- Policy development and review
- Framework alignment
- Gap Analyses
- Vulnerability Scanning and Analysis
- Risk Assessments
- Data Mapping and Governance
- Board Reporting

The LRS Difference

LRS' vCISOs have lead security programs across a variety of verticals and hold numerous cybersecurity certifications. Current certifications include:

- CISSP
- CCISO
- HCISPP
- Security+
- CISM
- GPEN
- CCSP
- OSCP
- CRISC
- OSCP
- CGEIT

LRS utilizes a full bench of security practitioners to support its Virtual CISOs. These experts provide additional support for operational activities such as:

- Penetration Testing
- Automation & Development
- Firewall Assessments
- EDR Management
- Active Directory Security

Call our Security team today.

They'll ask you some preliminary questions about your security environment and schedule a time for a free consultation.
